

 **REPAIR**™

 **REPAIR**™

Minimally Invasive Protocols for Optimal Periodontal and Peri-implantitis Patient Management

GUM DISEASE!

As dental professionals we see it every day. Half of adults over the age of 30 have it, as do **70% of adults 65 and older.**¹

REPAIR Perio™ and REPAIR Implant™ protocols were developed to provide clinicians a scientifically advanced treatment option to assist in the management of periodontitis and peri-implantitis. Utilizing the WaterLase iPlus 2.0 and patented Radial Firing Perio Tips™, REPAIR Perio and REPAIR Implant provide a safe, effective laser treatment protocols that patients accept.

- ★ Minimally invasive protocol
- ★ Promotes cementum-mediated periodontal ligament new-attachment to the root surface in the absence of long junctional epithelium
- ★ Treat site specific or full mouth cases for greater flexibility in treatment planning
- ★ Easy access to the implant surface
- ★ Capable of gentle removal of subgingival calculus and granulation tissue associated with implant disease
- ★ Laser photoacoustic properties effectively debride the implant surface
