Why businesses utilize CompleteCloud

We know businesses are looking for new technology solutions to solve key business problems. We boiled them down to what we call **"the 3 Ps"**.

Pain: Most IT pains occur when a business outgrows their current support model (either internal or outsourced), struggle to keep up with evolving cyber security threats, or have strict compliance or regulations they have to meet.

A local bank had outgrown their current support model but needed to maintain compliance with FDIC audits. CompleteCloud centralized their data, drastically improved their backup process, simplified their audits, and gave them the support they needed to continue to grow

Purchase: The industry standard for refreshing IT hardware is around 3 years to ensure smooth performance, but most companies delay this as long as possible due to the cost. Core software upgrades may also get pushed of due to the added hardware cost associated with them impacting critical business functionality

A large physicians network with 40 locations was in desperate need of a hardware refresh and by moving to CompleteCloud ended up saving them $3,000,000 in capital expenses they nolonger had to pay.

CompleteCloud is the most secure IT platform on the market that allows companies to rethink the way they pay for, access, and support their IT needs. Knowing that business owners today care about two primary aspects of their IT, security and employee productivity, the CompleteCloud platform was built to help businesses leverage IT as a strategic advantage.

Productivity: Businesses need a reliable IT platform that enables employees to do their job properly and not be an inhibitor to getting their job done. Many IT solutions today are piece-mealed together with a slew of different vendors, which ends up slowing business flows down dramatically. Throw in multiple locations for a single business and you've got yourself a potential train wreck for productivity.

Engineering firms, for example, love our productivity suite because they typically have multiple satellite offices and our suite allows each office to communicate and operate like they are still under the same roof.
