

PRESS RELEASE

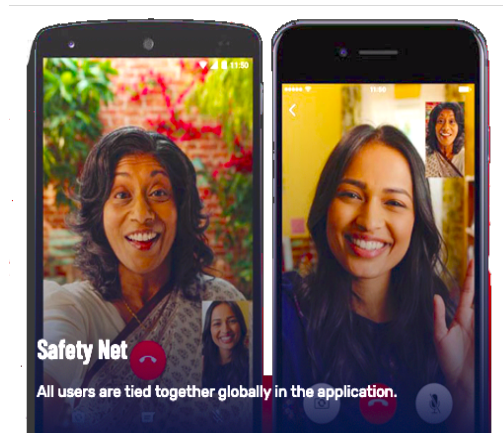

WORCESTER, MA May 13, 2021 / Unity-News-Wire

Launched just weeks ago, SAFE4R is the first Global Social Protection App for smart devices. It provides immediate support in the event of any crisis. This mobile app is redefining the concept of “safety in numbers” by using technology to simultaneously send Alert message to “witnesses” and livestream from your phone to all witnesses, your location and recording files uploaded to the cloud for 6 months, notify local Police and much more.

“SAFE4R has far-reaching implications for personal safety. Each of us is a potential victim, every minute of every day. Together we can create the **SAFE4R Global Safety Net**” **Rocky Wright** (Developer)

The app can be activated by voice or button click, immediately notifying your designated “witnesses”, sending a livestream to them and to the cloud where it cannot be erased, and can also be given to the authorities. The unique functions of this app are that it can alert all users with-in 1,500 sq. ft. of your precise GPS data, enabling witnesses and first responders to locate you quickly. The Safety Net provides a new layer of immediate response that works with the 911 system.

More than 45,000 users in an early beta test are now active with the Safety Net growing every day. For more info, visit [SAFE4R](#) where there are links to YouTube explaining the technology. For less than \$0.20/day anyone can be Safe4r! A free version is available with limited features.
