TEST COMMENTS:

Very little measurable rainfall in this area during the growing season led to the current D3-D4 drought intensity rating (extreme/exceptional) for Dodge county, according to the US Drought Monitor. About the only significant moisture for this crop came directly from the irrigation pivot. With the exception of June, this season was also warmer each month over average. Though grain moisture at harvest was in the 13-17% range, stalks were standing strong and ear retention was excellent. Overall yields from this irrigated plot were about 20 bu/a higher than the 9-yr historical average.
