

CrisisGo's Full Suite of Tools and Features

A Comprehensive Safety Platform

CrisisGo's digital safety and crisis response platform connects people, businesses, and technology to ensure everyone has what they need to be safer. CrisisGo is available on every computer and mobile device to make safety accessible no matter what screen you're looking at.

Emergency Communication

2-Way Communication

Never lose communication during a crisis with 2-way messaging groups that allow vital information to reach people in need.

Automatic Escalation

Set specific Alerts, Panics, and Reports to automatically escalate to first responders to ensure that everyone needed can be part of the solution.

Panic

During an isolated incident, you can directly request for immediate help from your security team without alerting the entire organization.

Alert

Inform everyone connected to your organization with a mass-notification that includes an audible tone for distinct notification. Alerts spur immediate action and include descriptive messaging capabilities for all members of your organization.

Fast Alert

The Fast Alert button allows you to send an Alert quicker and easier during an emergency. When seconds count, this shortcut version of the Alert allows your staff to act quickly to warn your entire organization about danger.

Crisis Response

Checklists

Provide emergency checklists with role-based, actionable instructions to guide individuals through the proper response steps

Maps and Documents

Any building or evacuation maps, as well as useful safety how-to PDFs, are available at your fingertips.

Check In

Assess the status of your staff through a quick, answerable prompt to identify who is at risk and offer support. The responses are compiled for easy review.

Roster Event

Account for your stakeholders in greater detail with in-depth status reporting. Administrators can review statistics in real-time right from their mobile device or computer.

TaskM

For whatever crisis response needs that may arise, TaskM allows your organization to create and assign task lists on the fly and manage/monitor projects of all levels of complexity in real-time.

Safety Preparedness

Drill Management

CrisisGo's Drill Management feature allows you to automate drill scheduling, drill monitoring, and drill reporting all from your Dashboard.

Tip & Incident Reports

The details of any incident can be quickly and easily documented through an intuitive report that is shared with the organization's administration.

Safety Awareness System

Keep your stakeholders aware of safety risks and solutions through content-specific safety cards.

Report

Report any harassment with a thorough and accessible reporting tool on your mobile device or computer. Reports may be sent anonymously.
