Additional Services Offered by InMotion

InMotion is known for robotic system integration and services, but we also specialize in other areas. These include custom machine building, contract manufacturing, fabrication, and machining. Our goal is to be a full service supplier for our customers. We want to be a value added resource in multiple facets of your operations, not just robotics. Please read below for more information about our services and our goal to be one of your value-added resources:

- **Custom Machine Building:** To date, InMotion has designed and built many custom machines including MIG welding systems, presses, material handling equipment, and others. Our systems are designed with aluminum framing or welded steel, your choice. Our team designs your system with great attention to cycle rates, ergonomics, and safety. Your machine will be finished with the color of your choice, safety systems, and operator instruction labels. You will also be an integral part of the design process as our goal is to build a system that exceeds your needs as well as represents the features you are looking for.
- **Contract Manufacturing:** Our shop is equipped with ABB and Panasonic welding systems for manufacturing weldments and welded components. In addition to weld manufacturing, we also have capabilities to produce machined components. Give us your prints and we will offer proposals for completion of your outsourced or purchased components and you will be pleased with our work, support, and attention to detail.
- **Fabrication:** Part of building welding and robot cells is fabrication. As a result of our experience in this field, InMotion has a full staff for designing and building your fabricated structures and components. Let us look at your needs for metal or aluminum frame work, machine frames, mezzanines, tables, carts, benches, or whatever you may be in need of. Our team will work with you to design functional products that will not only serve their intended purpose, but will add to the aesthetics of your facility with clean lines, modern looks, and extreme durability.
- **Machining:** In addition to our machine shop housed in our robotic and equipment facility, InMotion also has a second location serving as a full service machine shop. At this location we have a staff of designers and machinist ready to fill your tooling and machined component needs. Whether CNC, wire EDM, or traditional machining is needed, our group can satisfy your most rigorous tooling requirements. Let us see your drawings for excellent pricing and solutions.

Thank you for considering InMotion for your manufacturing needs. Please contact us for more information or to discuss your needs in greater detail.
