A plan is being established of the major items that need to be done to correct the problem with the water.

1. Call Gopher State for locate.
2. Create a swale in at the south end of the alley
3. Define alley (get a surveyor?)
4. Sculpt the alley and add "pink rock" to it at the sculpt, to allow the water to flow and sieves out the silt from the catch basin north along the west side of the alley right of way up to the pole by the north of the liquor store.
5. The ditch should be 12" deep by 18-24" wide.
6. Line the ditch with crushed rock as established by the source
7. Define the other alley's
